Vanuatu Climate Finance

Vanuatu, like most Small Island Developing States (SIDS), bears little responsibility for climate change, but its geographical, socioeconomic and climate profiles makes it particularly vulnerable to its impacts. Despite this, Vanuatu remains poorly funded, and approved finance fulfils only a small part of actual needs. With the majority of finance focused on adaptation, the Pilot Program for Climate Resilience (PPCR) and the Least Developed Countries Fund (LDCF) are the biggest contributors. Vanuatu is gearing up to access transformational development finance from the Green Climate Fund (GCF), but substantial scaling up both climate adaptation and mitigation finance to Vanuatu is vital - both to address the vulnerability of its inhabitants by making agriculture, biodiversity and infrastructure sectors more resilient to climate impacts, and to shift the energy mix away from fossil fuels. The scale of financing needed to cope with climate change in Vanuatu and its impacts is likely to be in the billions of US dollars.
