REASON FOR TODAY'S CALL:  
 The tubes are leaking. They apparently broke and it leaks a lot of water under the sink.

DESCRIPTION OF WORK PERFORMED:  
 The connection between the faucet spray head and hose was loose. I removed the spray head, added some grease, and reattached. During testing I noticed a small leak coming from the left sink drain. I replaced the beveled tailpiece washer and tested again. No other leaks detected.

TECHNICIAN RECOMMENDATIONS:  
 The nut that secures the faucet to the sink is rusting, which has caused the threads of the bottom of the faucet to start rusting. The copper supply lines from the faucet are not showing signs of rising but I have let Luis know this could potentially cause issues down the road.
