REASON FOR TODAY'S CALL:
 KitchenAid dishwasher water leak. copper hose loose or broken KitchenAid refrigerator plastic water hose replacement Garburator not working & rusted blades
 Bathroom sink water stopper missing

DESCRIPTION OF WORK PERFORMED:
 -JUN1: -The garburator grinding chamber had deteriorated to the point that bits of metal were breaking off. I replaced the garburator with new and tested by filling and draining the sink multiple times while running the garburator. -I replaced the copper dishwasher supply line with a braided supply line and tested by running the machine through a short fill & drain cycle. -The lavatory drain body will have to be replaced as I do not have a replacement drain stopper that will fit. -I noticed while onsite that the lavatory sink is very slow to drain. -JUN6: I used the PowerSpin drain snake to clean the lavatory sink drain and tested by filling and draining the sink multiple times. -I was able to find a drain stopper in the spare parts bin at one of my wholesalers that fit the drain. I installed this stopper and tested.
