REASON FOR TODAY'S CALL:
 Water leaking under sink in kitchen. Possible issue leaking from garburator or drain pipe Ms Kim: 604.401.4423 Buz#7062

DESCRIPTION OF WORK PERFORMED:
 I filled and drained both sides of the sink multiple times while running the garburator and couldn't see any sign of leaking from above or below the sink. The kitchen faucet is stiff to turn side to side and in turn the nut that secures the faucet to the sink/counter was starting to loosen. I resecured this nut and continued testing with no sign of leaking. I also ran the dishwasher through a fill and drain cycle, also with no sign of leaking.

TECHNICIAN RECOMMENDATIONS:
 *It is possible that given the faucet was loose that water, if splashed onto the top of the sink rim, could have been finding its way through to the underside of the sink.
