REASON FOR TODAY'S CALL:
 Kitchen Sink: Leak dripping under sink, when running the water.

DESCRIPTION OF WORK PERFORMED:
 The leak was coming from the connection between the faucet spray hose and head. I tightened this connection and tested. No other leaks detected.

TECHNICIAN RECOMMENDATIONS:
 I noticed during testing that the hot shut off valve under the sink (connected to the faucet) is not working. The concierge told us the isolating valves were in the hallway just outside of the unit but those appear to be the main shut off valves to the risers supplying multiple units. I searched for the main water shut of valves within the unit but could not find them. These will have to be found and the valve under the sink repaired.
