REASON FOR TODAY'S CALL:

I have 2 issues concurrently: 1) My bathtub is draining poorly. The water will collect and eventually drain after some time. This is sped up if I'm taking a hot shower. This has happened before (maybe 2 years) ago and was a quick fix for the previous plumber. 2) My kitchen sink is not draining because I stupidly put the pulp from my celery juice down the gaburator and ran it. It was really stupid because I put way too much in! The garburator (which you guys installed for me) works fine but the water will come up into my second sink when I run it. I've tried to pour baking soda and vinegar down there to let it sit and pour hot water down too but it eventually doesn't drain again.

DESCRIPTION OF WORK PERFORMED:

-I used the PowerSpin drain snake to clear the kitchen sink drain blockage and tested by filling and draining both sides of the sink. -I cleared hair from the en-suite tub drain. -I reattached the drain stopper in the guest tub.
