REASON FOR TODAY'S CALL:
Leaking kitchen faucet (K-12171).

DESCRIPTION OF WORK PERFORMED:
The shut off valves under the kitchen sink (connected to the faucet) were not working. I first repaired these valves by replacing the washers, stems, packing, packing nuts, and handles. I then replaced the cartridge within the faucet and tested. During tested I noticed the pressure coming out of the hot side was lower than the cold. I disconnected the hot supply and using the cold water I flushed debris out of the hot line. I reconnected the hot supply using a braided Lav extension and tested again. The pressure is back to normal and the shut off valve and faucet are functioning normally.
