REASON FOR TODAY'S CALL:  
 The washer is draining ok but the suite's pipe is partially blocked that's why drained water is backing up out of the pipe

DESCRIPTION OF WORK PERFORMED:  
 I used the PowerSpin drain snake to clean the laundry drain and tested by running the machine through a few fill/drain cycles.

TECHNICIAN RECOMMENDATIONS:  
 The dryer doesn't seem to be secured to the washing machine. There are clips at the back of the machine but I couldn't figure out how they operate. Also when I lived in the building I seem to remember there being seats attached to the top of the washing machine that the legs of the dryer sat within. These seats aren't there. It may be a good idea to have an appliance guy take a look and make sure the machine is properly secured to ensure it doesn't move around when I use.
