REASON FOR TODAY'S CALL:
 -kitchen faucet handle loose.

DESCRIPTION OF WORK PERFORMED:

-disassembled kitchen faucet to retrieve piece inside that handle stem attaches to. Re-assembled faucet and tested. This handle stem is installed as tight as possible. I informed the tenant that if they notice it getting loose again to tighten it back in before it comes off because once it loosens all the way the piece it attaches to inside the faucet falls down and the faucet will need to be disassembled again to retrieve it. -the handle on the lavatory faucet located on the left sink in the master bathroom also came loose. I tightened this back on. This handle being loose stripped the plastic cartridge a bit so if the handle becomes loose again we will need to replace the lav cartridge. To replace this cartridge we would need to locate the main water shut off as there is no shut off valves under the sink for this faucet.
