REASON FOR TODAY'S CALL:
 Our bathroom toilet's water tank does not fill.

DESCRIPTION OF WORK PERFORMED:
 The shut off valve to the toilet was deteriorating causing bits of rubber to clog up the supply line and fillvalve. I replaced the shut off valve with a new 1/4 turn style and replaced the fillvalve. When I re-pressurize the cold water I noticed a few large bits of debris flow to the new shut off valve, I removed the shut off valve, attached a 6' piece of Wirsbo piping and flushed out the cold waterline into the tub. Large bits of what appeared to be rock or granite were flushed out of the cold waterline. I re-installed the shut off valve, connected the toilet supply and tested by flushing the toilet multiple times.
