REASON FOR TODAY'S CALL:  
 -replace kitchen faucet -leak under kitchen sink

DESCRIPTION OF WORK PERFORMED:  
 -The washer in the hot shut off valve for the kitchen faucet was deteriorating, I believe pieces of this washer were lodged internally in the faucet causing low pressure. I could not get this debris cleared out of the faucet. -I repaired the hot shut off valve by replacing the washer, stem, packing, packing nut, and handle, then installed the new Delta Trinsic faucet. -I tested the sink by filling with water and draining, I found that one of the fittings on the drainage was loose, I tightened this fitting and tested. -Everything in the washroom seems to be functioning normally.
