REASON FOR TODAY'S CALL:

-Dual flush toilet runs and drips after every flush. -Shower head pressure is low but high when head is removed. Tried multiple shower heads, removed flow restrictors and cleaned with CLR. -Garburator leaking.

DESCRIPTION OF WORK PERFORMED:

MAY25---Toilet: I replaced the toilet flushvalve gasket and tested. ---Shower: The wingback 90 in the wall behind the shower arm is not properly supported. I removed the heavy shower 90 and spray head and replaced it with a smaller Delta shower head and arm. I removed the valve trim, inspected the cartridge and found there to be no debris inside. I then ran the shower for 5 minutes with the trim removed to ensure there was no leaking caused by the loose wingback 90. During the 5 minutes I saw no signs of moisture. I re-installed the trim and handle. ---Garburator: The garburator is leaking right through the unit and cannot be repaired. It will have to be replaced. MAY30---I replaced the garburator with a new Badger5 and tested by filling and draining the sink multiple times while running the garburator.
