REASON FOR TODAY'S CALL:

-bathroom faucet: the twist on the left water turn is missing and not easy to turn on and off the water on that side. -In the same master bathroom: the side plastic cover for the tub is not installed properly and falls off. -Rain Shower heads ? water running slow. Maybe there is a lot of scale inside. Please call me before replacing. Thank you!

DESCRIPTION OF WORK PERFORMED:

*May30: ---Master Bathroom: -I used double sided tape to secure the tub skirt. -I removed the shower head and found no debris inside that could be removed. I re-installed the shower head. -The lavatory faucet is missing a part on the hot handle. I will contact the manufacturer and see if this piece can be ordered. ---Guest Bathroom: There is no debris in the shower head. The shower head is quite large and the pressure seems normal for a head this size. I mentioned to the tenant that if she wanted increased pressure we could replace the head with a smaller one. She said she was ok with the existing head. ---July7: I returned and installed the new Hot handle in the master bathroom lavatory faucet
