REASON FOR TODAY'S CALL:
 -toilet keeps running/filling -drainage pipe under kitchen sink broke

DESCRIPTION OF WORK PERFORMED:
 ---Powder Room Toilet(main floor): The flushvalve gasket was warped, allowing water to trickle from the tank through the bowl - the toilet FillValve float was sticking, not properly cutting the flow of water off to the tank once full. I replaced the FillValve, flushvalve gasket, and supply line. Tested and in good working order. ---Kitchen Sink Drain(basement suite): The ABS drainage became disconnected in behind the back wall of the cabinet. I found that the ABS pipe was never glued into the fitting just behind the cabinet, also the ABS drainage had cracks in the slip fittings. I repiped the ABS drainage and tested by filling and draining the sink multiple times.
