REASON FOR TODAY'S CALL:

My dishwasher has been getting back flow of water yesterday and today. I thought my dishwasher was getting old , and start having problems. So I went to buy another one. I did not use my dishwasher today, when I came home just now, I found my dishwasher is filled with water at the bottom just like yesterday. Feeling quite baffled, don't know where the water come from. The kitchen sink and the garburator seems to drain well enough, so I don't know what is going on, having this mysterious water inside the dishwasher. My garburator 's motor had stopped quite a while ago, it needs repair or replacement? New dishwasher is arriving Thursday, would be great if you can help me solving these problems before installation. Thanks.

DESCRIPTION OF WORK PERFORMED:

-Winnie turned the shut off valve that supplies water to the DW to the off position the night before our visit which seemed to have stopped water from entering the DW. I believe there is an issue with the machine itself. -I unjammed the garburator and tested by filling and draining the sink twice while running the garburator.
