REASON FOR TODAY'S CALL:

Toto. This is the valve which open after flushing and when the water level in the tank rise to top will shut off When I pull up it still not close so it means problem is inside valve I think Inside that valve is some kind of washer and it can be damage or can be there some dirt. I think it may be easier to replace the whole part versus trying to fix a small part.

DESCRIPTION OF WORK PERFORMED:

The FillValve was malfunctioning, not fully shutting the water off once the tank was full. The shut off valve was also leaking. I replaced the FillValve & supply line and repaired the shut off valve by replacing the washer, stem, packing, packing nut, and handle.
