REASON FOR TODAY'S CALL:
 Toilet leaks after being flushed. It is leaking from where the tank meets the seat. Location: 989 Beatty, unit 1001

DESCRIPTION OF WORK PERFORMED:
 I removed the toilet tank and reinstalled with a new tank to bowl gasket, tank bolts, and supply line. The shut off valve to the toilet was starting to break down, clogging up the FillValve and causing it to take a really long time to refill the tank after flushing. I repaired the shut off valve (connected to the faucet) by replacing the washer, stem, packing, packing nut, and handle. I then replaced the fillvalve & flapper and tested.
