REASON FOR TODAY'S CALL:

The water pressure in our kitchen tap is very low, the water does not run clear, and takes a long time for it to get cold. The water pressure is normal in our bathroom. Our building had some water shut offs in the summer, and I wouldn't be surprised it was something to do with that.

DESCRIPTION OF WORK PERFORMED:

I cleared debris from the faucet spray head. Some of this debris was due to the shut off valves under the sink (connected to the faucet) breaking down internally. I repaired these valves (Hot & Cold) by replacing the washers, stems, packing, packing nuts, and handles. Tested and pressure is back to normal.
