REASON FOR TODAY'S CALL:

The pressure of the water coming from the water tab in the kitchen has been low, and there is leakage of water from the side of the tab. The leakage happens both when the water is running and when it is off. The mount of leakage is not too high but it is problematic.

DESCRIPTION OF WORK PERFORMED:

-I repaired the Hot & Cold shut off valves under the sink (connected to the faucet) by replacing the washers, stems, packing, packing nuts, and handles. I then replaced the mixing cartridge(K35A) within the faucet and tested. Pressure is back to normal and no leaks present.
