REASON FOR TODAY'S CALL:
Issues with guest bathroom toilet..

DESCRIPTION OF WORK PERFORMED:
When the toilet tank was refilling after a flush the fillvalve was spraying out of the top, and through the space between the tank and the tank lid. This water was running down the wall and collecting on the floor. The flapper was also warping and the shut off valve supplying water to the toilet was failing, not fully turning the flow of water off. I first repaired the shut off valve by replacing the washer, stem, packing, packing nut, and handle, I then replaced the toilet fillvalve, flapper, and supply line. Tested and in good working order.
