REASON FOR TODAY'S CALL:

1) bathroom pedestal sink has a drip underneath when water is turned on. I turned off the water to prevent further drops or worse! I'm on the third floor of a 3 floor condo building. 2) kitchen sink tap has a tiny trickle of water going into the sink when cold water tap is on. It's not dripping under the sink. The trickle goes into the sink. May need a new cartridge or?

DESCRIPTION OF WORK PERFORMED:

-The nut that secures the lavatory sink lever rod in place was loose. I tightened this nut and tested by filling and draining the sink. -I replaced the hot and cold cartridges in the kitchen faucet and tested. -While onsite it was mentioned that the toilet runs periodically. I found that the flushvalve gasket was broken. I replaced this gasket and tested.
